

Clinically motivated scenarios

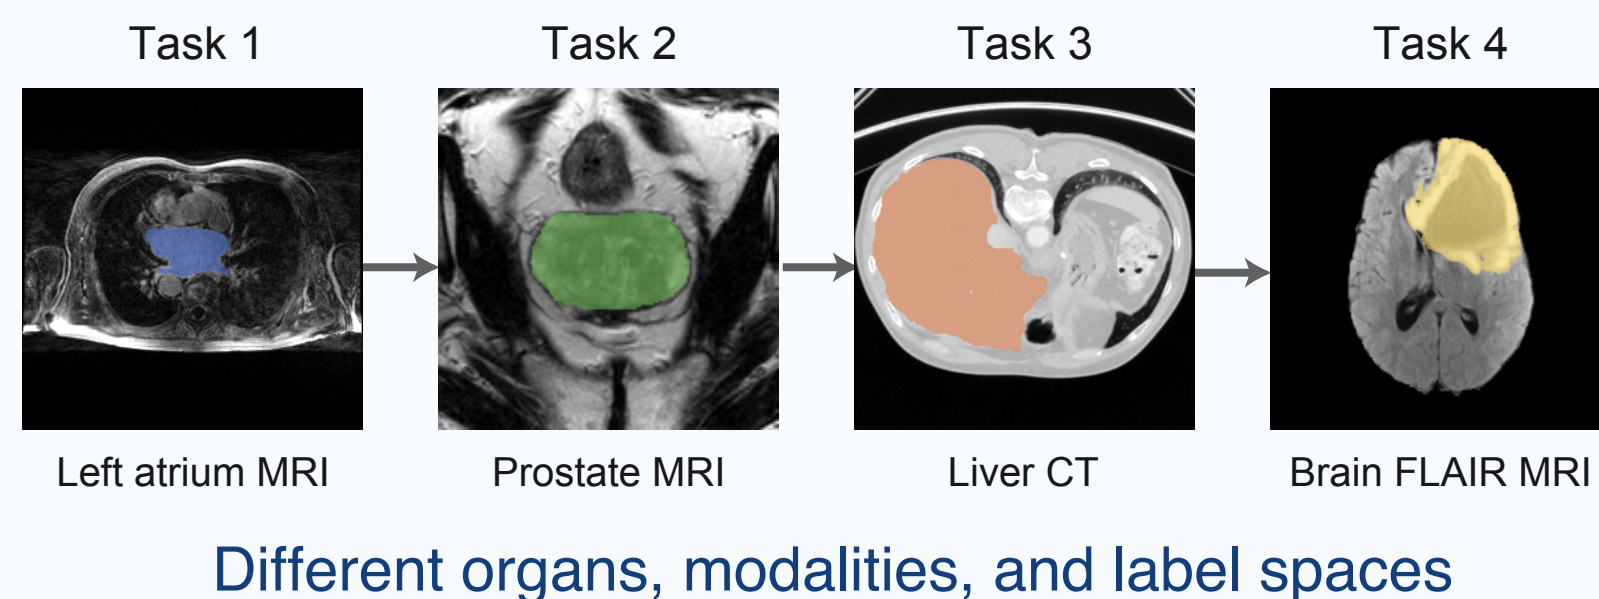

(a) Domain-CL

(b) Class-CL

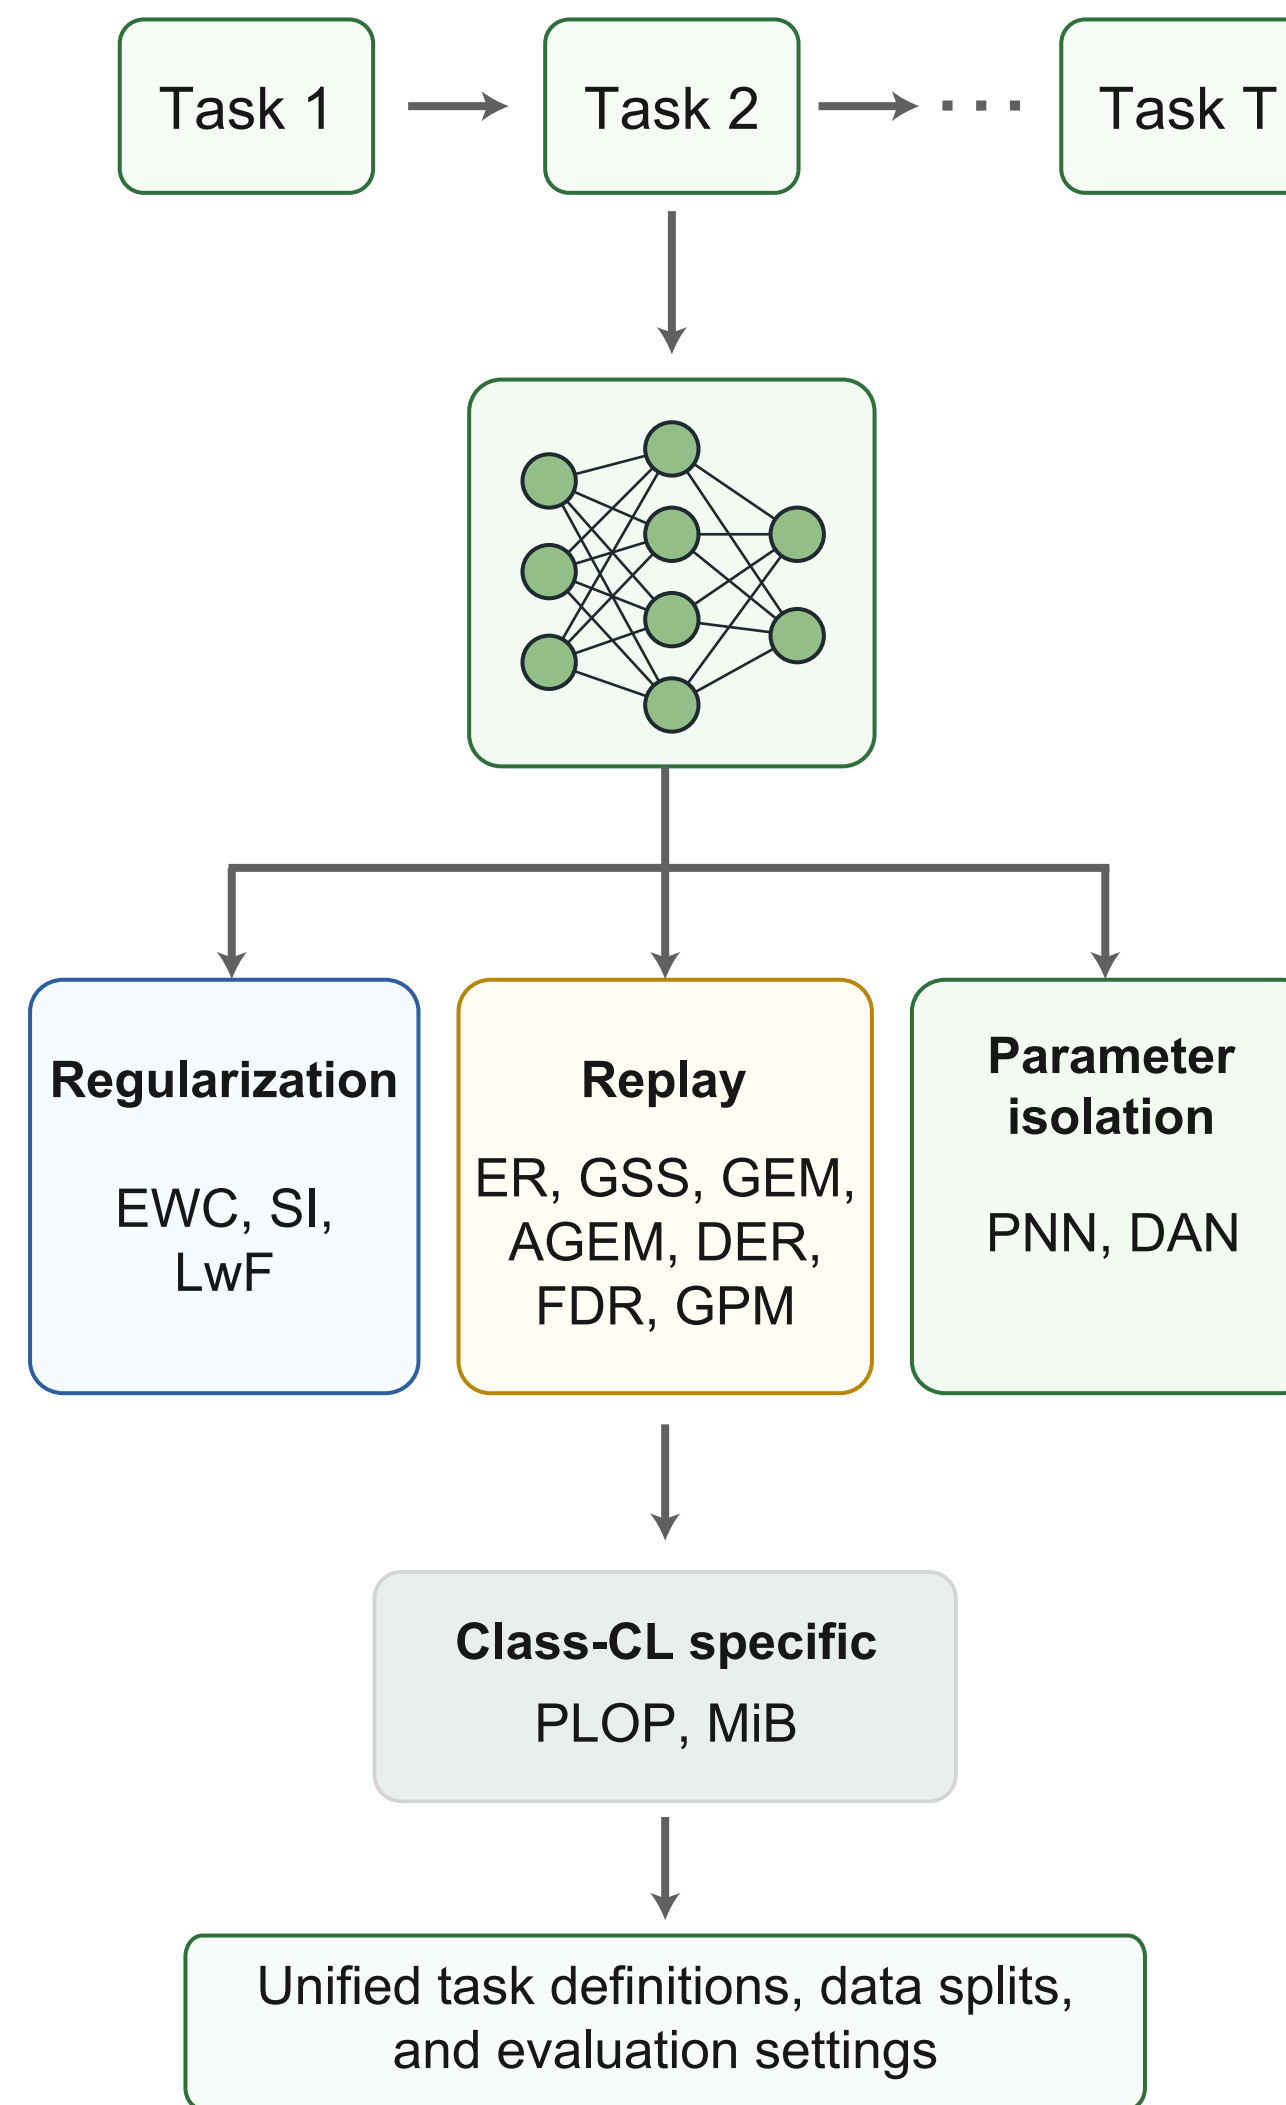

(c) Organ-CL

Unified benchmark protocol

Sequential learning

Beyond-forgetting evaluation

Conventional metrics

A-Dice	general performance
BWTR	stability (forgetting)
WCD	whole-class Dice (Class-CL)

Beyond forgetting

RMA plasticity	E-FWT generalizability
MPE parameter efficiency	DRR replay burden

Key Findings

- No single CL strategy satisfies all requirements
- Replay methods balance stability and plasticity
- Parameter-isolation methods reduce forgetting but increase model size
- Forward generaliz ability remains limited
